

SUSTAINABILITY POLICY

POLICY

Downer is committed to ensuring sustainability aspects (including environmental, social, and economic) are considered as part of the Queensland Train Manufacturing Program.

OUR PURPOSE

We will leave a lasting legacy by positively impacting the community, delivering assets that contribute to economic prosperity and social inclusion in an environmentally responsible and sustainable manner.

SCOPE

This policy applies to the design, construction, and operation of the Queensland Train Manufacturing Program.

OUR PROJECT COMMITMENTS:

- Minimise impact to the community, maximise opportunities for local business and disadvantaged workers, and create a restorative community project that is resilient to climate change.
- Deliver value for money and improve the resilience of the Queensland energy network allowing for a cleaner and more sustainable grid.
- Positive environmental performance including implementing circular economy thinking and minimising waste while optimising energy, water, and material use.
- Establish a community legacy by enhancing cultural heritage, investing in the local economy, using local content, and enhancing local biodiversity.
- Establish, monitor, and review sustainability objectives and targets to achieve continual improvement of our sustainability performance.
- Consider sustainability aspects (environment, social, economic) in the procurement of goods and services and aim to minimise sustainable risk and maximise sustainable opportunities and benefits for the total life cycle.
- Deliver 'Excellent' Infrastructure Sustainability ratings across Design & As Built and Operations phases.
- Ensure climate change adaptation is integrated into the design, construction and operation of the facilities and rolling stock.
